

AGAVE 'Kara's Stripes'

Origin: Discovered by a California nurseryman

Species: *attenuata*

Protection Status: US Plant Patent 19,444

Characteristics:

Agave 'Kara's Stripes' is a selection of *Agave attenuata*. Commonly known as Spineless Century Plant, it tolerates, heat, drought, and moderate salt exposure. The variegation is most pronounced in bright light direct sun and its lovely color brightens up any location. 'Kara's Stripes' is very dramatic when planted in mass or as a specimen in a rock garden. It makes an outstanding statement in containers when contrasted against dark foliage. As an additional bonus, it is people-friendly since it doesn't have the spines.

Hardiness: USDA 9 to 11

Foliage: Handsome yellowish green foliage with green variegation

Flower: After 10 years or more

Habit: Mounding, rosette.

Propagation: Tissue culture. *License required to propagate.*

Culture: Bright light, direct sun. Drought tolerant.
