

LIBERTIA Goldfinger ('NNGF2')

Origin: Selected by Naturally Native New Zealand Plants, Tauranga, New Zealand.

Species: *Libertia ixioides*

Protection Status: US Plant Patent #18,228; COPF Restricted.

Characteristics:

Looking for fantastic golden yellow foliage in the garden? This is the plant for you. The elegant weeping foliage of this exciting new selection has a prominent golden yellow central stripe. Profusions of pure white star like flowers are produced in clusters just clear of the foliage from mid spring, followed by attractive large yellow berries in autumn. This delightful little plant really packs a punch and is ideal to provide unique color to low maintenance pots and containers on the deck or patio.

Hardiness: Hardy to USDA Zones 7-11.

Bloom: Profusions of pure white star like flowers from mid spring

Foliage: Elegant weeping foliage with a prominent golden yellow central stripe

Habit: Compact clumping habit 1.5' x 1.5'

Propagation: TC, division. *License required for propagation.*

Culture: Moist, fertile soils. Full sun to light shade.

Production time: 8-12 weeks from tissue culture to 5cm pot GOL. 16-24 weeks from tissue culture to finished 2-litre pot.
