

NEMESIA Jubilee ('Confetti Frosted Pink')

Origin: Discovered by Australian Nemesia Breeder.
Species: Hybrid
Protection Status: US PP #18,285; COPF restricted.

Characteristics:

Many variegated Nemesia have been discovered in the past, but none with the charm of **Jubilee**. The bloom is a strong pink and variegation of the foliage is striking. Yes, it does have slightly less vigor than its straight-green counterpart; however, its near sterility makes up for it. Flower power and a compact habit are great bonus features to the beautiful color contrasts.

Hardiness: USDA zone 8

Bloom: Medium pink blooms, nearly sterile.

Foliage: Variegated. Medium growth rate (if Nemesia are normally fast).

Habit: Up to 8" tall in bloom.

Propagation: Cuttings. *License required for propagation.*

Culture: Full sun, fertile soil.
